README.md 2023/1/3

## CS323 Project

单人project 韩梓辰

<del>有现代化编程语言,狗都不写C</del>

This project written in golang (go version 1.18)

## Usage

Due to I used cgo in the code. You should compile the code through gcc or clang.

```
go build -o bin/splc main.go
```

to run the code you need a spl file

```
${OutputExeFile} ${SPL_FILE_PATH}
```

output file will in the same path of your input

## Project 3

IR 的生成依赖于ir\_gen这个类,其中会分析我们在之前分析代码的时候生成的语法树,然后生成中间代码我们使用ir的数据结构,将整个生成变成一个链表

```
type IrCode struct {
    IrType WordType
    val []Operand
    ifR WordType
    Prev *IrCode
    Next *IrCode
}
```

将operand独立生成一个类,方便传入类型

```
const (
    VARIABLE operandType = iota
    CONSTANT
    LABEL
    FUNC
)

type Operand struct {
```

README.md 2023/1/3

```
opType operandType
val any
}
```

operand只有四种类型,我们将会把运算放入ircode的节点,从而表示一行的输出

分析完成后会逐行输出ircode
